Report Radar

Know where needs are rising.

A service-report planning concept for Alexandra, Johannesburg

Business case | Presenter: Tshepo Tleane, Business Case Lead

All findings use synthetic data

Every service report needs attention before it reaches the right team

- Residents report six kinds of problems.
- Each report must be sorted, prioritised and directed.
- Workload can rise after events such as storms or heatwaves.

Synthetic data: shows the approach, not real municipal service performance

Report Radar connects reports to planning, with people where judgement matters

Workload forecast

How many reports to expect over the next 4 weeks

Hotspot map

Where reports are concentrated

Synthetic data: shows the approach, not real municipal service performance

The dashboard lets us inspect the sample results and their limits

LIVE DEMO

reportradar.streamlit.app

Synthetic examples only. Wake the site and run the 2-minute check before presenting.

Forecast

Expected workload and its likely range

Problem areas

Hotspot map and ranked areas

Risk and workflow

Risk register, decisions and tickets

Emails are saved previews. Nothing is sent.

Synthetic data: shows the approach, not real municipal service performance

The sample forecast is steady, while water is the service to watch

69

reports a week forecast for the next four weeks

276

reports expected in total over four weeks

260–292

likely range for the four-week total

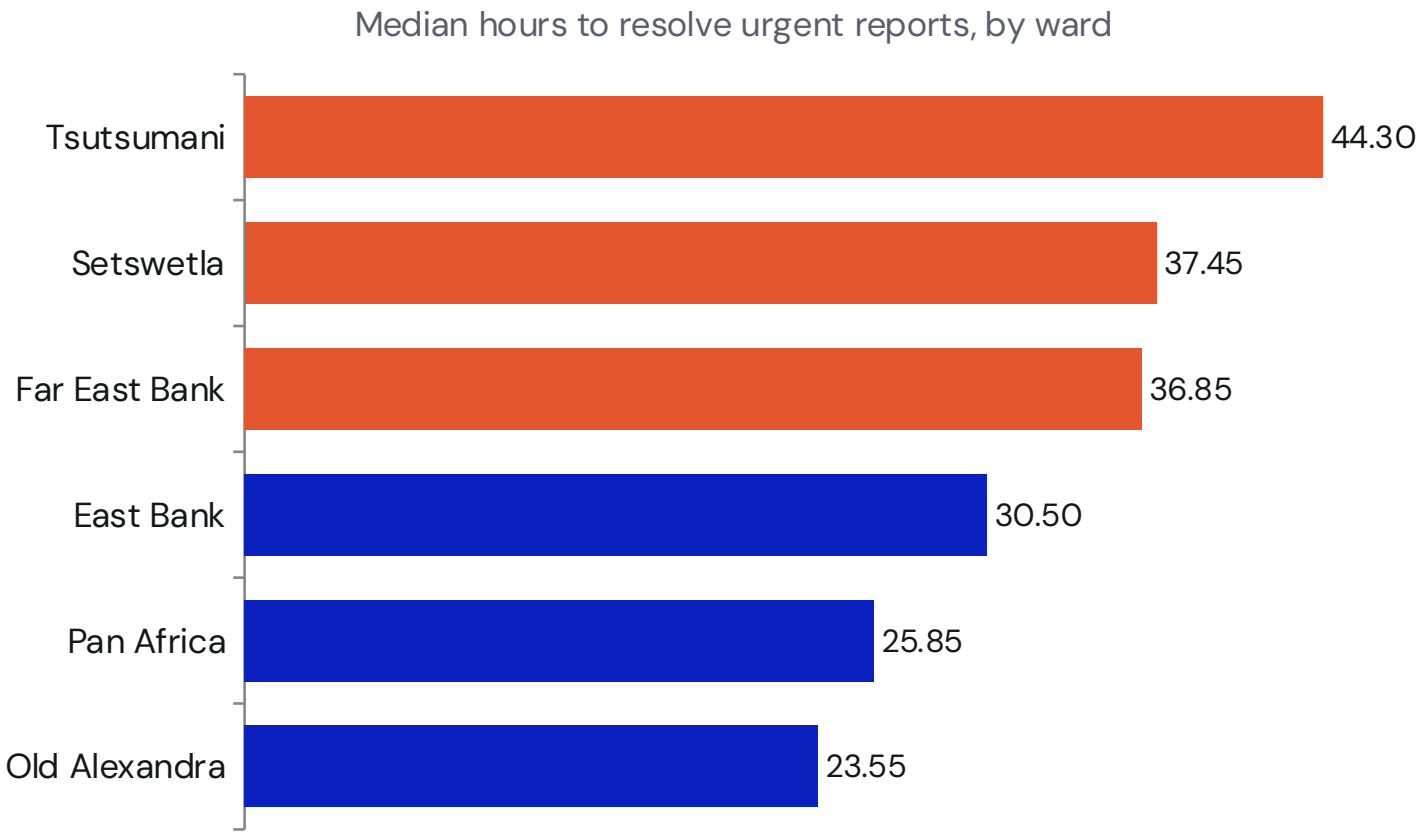

Water is the only service with a rising trend

About one extra report a week in this sample. A planning signal to test, not a real municipal forecast.

Synthetic data: shows the approach, not real municipal service performance

Urgent wait-time differences need investigating before planning by hotspot

44.3 h

Tsutsumani, the slowest ward

23.55 h

Old Alexandra, the fastest ward

Coral: the 3 wards above the project's screening threshold. Resolved reports only.

Synthetic data: shows the approach, not real municipal service performance

Automation organises routine steps while supervisors handle urgent or unclear cases

Routine steps are automatic

Personal details are hidden, then the report is sorted, routed, given a deadline, saved and logged.

People decide the hard cases

Urgent or unclear reports wait for a supervisor before work starts.

Still to validate

Deadlines are assumptions and the workflow is untested with real teams.

Synthetic data: shows the approach, not real municipal service performance

Privacy, language and fairness gaps must be closed before real reports are used

Privacy

RISK

Report text on the public dashboard is unmasked today.

ACTION

Mask report text on screen before any real data.

Language

RISK

Translated test examples are not yet checked by fluent speakers.

ACTION

Fluent-speaker review, then retest.

Fairness

RISK

Raw report counts can overlook quieter wards.

ACTION

Track outcomes by ward and include community feedback.

Synthetic data: shows the approach, not real municipal service performance

A responsible pilot needs municipal data, safeguards and operating arrangements

Validate on an approved sample of real reports

The municipality approves an appropriate sample.

Set privacy, access and contact arrangements

Including how contact preferences and consent are handled.

Confirm team contacts, deadlines and mail setup

Check the proposed deadlines match real operations.

PILOT COST

To be scoped

The project has no cost estimate, so we do not offer one. The demo runs on free hosting.

Synthetic data: shows the approach, not real municipal service performance

Approve a scoped validation phase, not a production rollout

1

Scope

Nominate municipal data, operations and privacy contacts.

2

Validate

Agree what a pilot must prove and how results will be reviewed.

3

Decide

Return with validated findings and a costed proposal.

Until then, Report Radar stays a synthetic-data demonstration, not a tool for real resident decisions.

Synthetic data: shows the approach, not real municipal service performance

Thank you

Know where needs are rising.

A proposal to test how better visibility could support service planning

Report Radar team | Business Case Lead: Tshepo Tleane | Questions welcome

Backup: notifications and a weekly summary exist; sending them automatically is next

	AVAILABLE NOW	BUILD NEXT
Resident replies	Email notifications are prepared and saved to an outbox.	Real sending: a mail server, verified addresses and agreed resident-contact rules.
Manager report	A weekly summary, for all teams or one team, can be previewed and downloaded from the Overview tab.	Sending the summary automatically on an agreed schedule.
